EXPERIENCE

Via.com (Ebix) Ghaziabad, India

Software Development Engineer August 2024 – Present

- Built end-to-end flight supplier integrations (BookNTravel, Travelopedia, Just Click N Pay) covering search, reprice, booking, and ticketing for series fares across domestic and international routes.
- Delivered NDC-based booking for Scoot, Sabre, and Star Air, including branded fares, meals, baggage, seats, and ticketing for one-way, return, and connecting journeys.
- Extended the Series Fare platform to support pluggable agent-supplied fare sources without breaking existing flows, cutting new-supplier integration time from ∼4 weeks to ∼4-5 days.
- Added B2C fare filtering and lowest-deal-fare logic, surfacing the most relevant and lowest-cost options for both B2B agents and B2C users.
- Integrated Air Arabia (G9) with live availability, bundle fares, and fare rules, and automated ingestion of newly released sectors.
- Diagnosed and resolved ∼8-10 production booking issues/month across IndiGo, Scoot, Star Air, and series-fare flows (SSR/seat handling, infant pricing, ticket printing, checkout fare mismatches), identifying root causes to prevent recurrence rather than repeated patching.
- Fixed input-handling and XML-parsing vulnerabilities as part of a PCI DSS compliance effort across the booking stack.
- **Technologies:** Java, SOLID, REST APIs, JSP, PostgreSQL, Git, Jenkins

Optimum Info Remote

Software Developer Intern September 2023 – March 2024

- Designed and built an HRMS covering onboarding, payroll, leave management, and access control for internal HR operations.
- Developed responsive UI with HTML, CSS, JavaScript, Bootstrap, and jQuery.
- Built backend services with ASP.NET Core and C#, integrated with SQL Server.
- **Technologies:** ASP.NET Core, C#, JavaScript, jQuery, SQL Server, Git

PERSONAL PROJECTS

- **Throttle My Ride** – Co-built an end-to-end rider platform with a 2-person team, implementing user onboarding, bike management, ride selection, navigation, and ride analytics, from system architecture to a working APK. *Java, Spring Boot, Docker, Flutter*
- **IQNexus** – Deployed and configured production infrastructure for a MERN-stack platform with separate student and admin portals; frontend on Hostinger, backend on AWS EC2, with Cloudflare for DNS. *MERN Stack, AWS EC2, Cloudflare*
- **NCR Metro Commute Automation** – Built a Cross platform application using Accessibility APIs to automate repetitive in-app workflows for personal daily use, integrating Flutter with native Android functionality. *Flutter, Native Android, Accessibility APIs*
- **Freelance Web Development** – Collaborated with a 3-person team to design and deploy client websites; owned frontend development and deployment. *Web Technologies, Hostinger, Netlify*

EDUCATION

- **I.T.S. Engineering College** 2020 – 2024
  B.Tech in Computer Science 79%
- **Green Field Public School** 2019 – 2020
  Class XII - PCM 91.8%

SKILLS

- **Languages & Backend:** Java, Spring Boot, C++, C#, ASP.NET, SQL, REST APIs
- **Frontend & Tools:** PostgreSQL, Postman, Docker, Git, Jenkins, React.js, JavaScript, HTML/CSS, Bootstrap, MongoDB

ACTIVITIES & ACHIEVEMENTS

- **Hackathons:** Led teams in Tech-a-thon 2.0 and Code-o-Fiesta; Top 5 finalist at IIMT College Greater Noida Hackathon (2023). Co-founded and revived student-run cultural clubs.
